*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1- 33, drawn to a method of identifying compounds that inhibit viral entry, classified in class 435, subclass 4.
- II. Claims 34-37, drawn to a method of identifying viral resistance, classified in class 435, subclass 91.33.

The inventions are distinct, each from the other because of the following reasons:

Groups I and II are drawn to methods and each is distinct from the other because they utilize different starting materials, therefore the outcomes are not be expected to be the same. Group I is drawn to a method for testing compounds for their effect on viral entry and inhibition. Group II is drawn to the isolation of a virus that is no longer inhibited by the testing compounds and determining the changes in the structure of the virus. Though there may be overlap between these two methods in question for groups I and II, each utilizes different materials and therefore the outcome is expected to be different.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search for one group will not necessarily be coextensive with the search for the other group, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1648

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
